

# Water Fountain

Healthy living is an important factor in modern society, so it is key to have easy access to high quality drinking water. We offer a refreshingly simple answer: The water fountain.

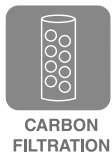

The Water Fountain delivers an instant and constant supply of the highest quality drinking water and utilises a direct chill system. Because the Water Fountain, unlike bottled water coolers, is supplied through the mains, it does away with the problems of storage, lifting heavy water bottles, degradation and sanitisation, not to mention running out.

The Water Fountain is constructed of high quality, stainless steel, making it ideal for locations where high usage is expected, with limited maintenance requirements.

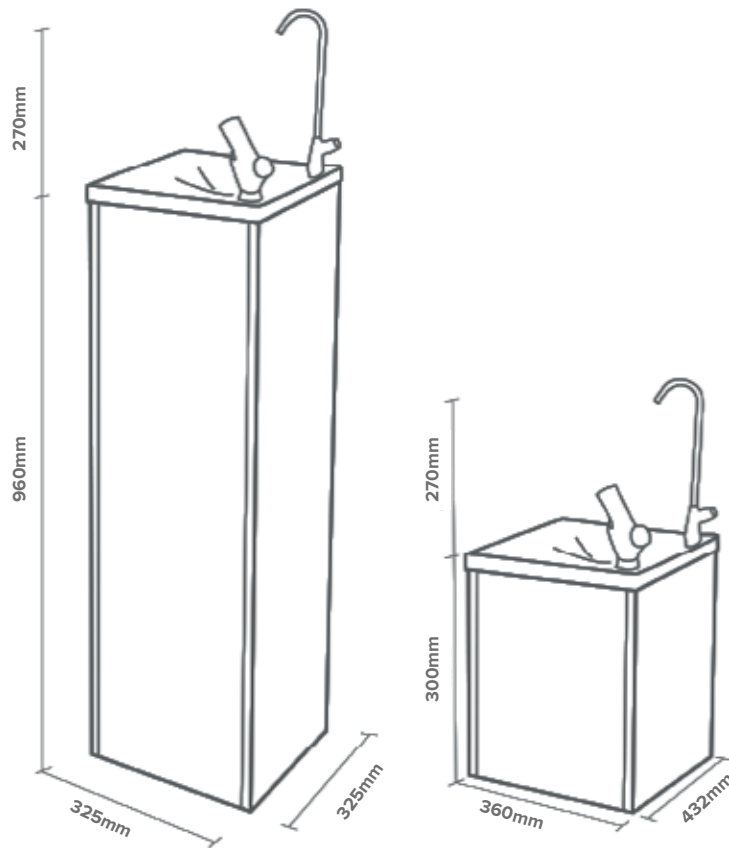

## The high performance choice

### Key features

- Push button bubbler & sports bottle filler
- Stainless steel sink top
- 1 micron carbon filtration
- High performance cooling

## Product details

Water options		Technical features	
Cold only 	Capacity	30 litres per hour	
	Weight	29kg	
	Options	Freestanding or wall mounted. Wall option can be positioned at required height for children/ disabled users.	

### Installation requirements

To ensure that the Water Fountain can be installed quickly and smoothly in your proposed location, each machine will require a 13A (240V AC) switched socket, which should not be more than one metre from the machine. Each fountain needs to be supplied with water from a rising main.

Access to waste drainage is required.
