

Firewall® patented UVC purification technology has been independently tested as

# COVID-secure

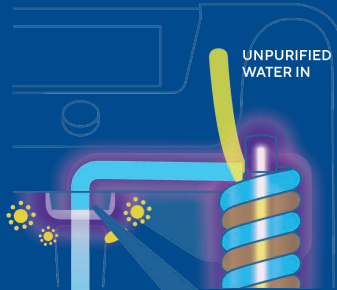

*"I have tested the Waterlogic Firewall® machine and can confirm it removes COVID-19."*

Dr. Gerba, University of Arizona  
Water & Energy Sustainable  
Technology Center

Infected vessels can be a vehicle for external cross-contamination as viruses can easily be transferred from one user to the next.

Firewall's intense UVC light deactivates the virus' DNA core, making it harmless and unable to reproduce.

The UVC action sanitizes and protects the nozzle. It creates a barrier, so the virus is stopped and neutralized with no chance of getting into the system or contaminating the water in the glass.

Better thinking, better water,  
better for you, better for the planet™
